Collaborative care is an evidence-based model of integrated mental health in primary care settings that shows clear and significant effectiveness for the treatment of depression, anxiety, and PTSD. Widespread implementation of Collaborative Care is now occurring across the country to answer the need for increased access for mental health treatment. Concurrently, there is a growing need for the treatment of substance use disorders, which often present in the primary care setting where they have traditionally been inadequately addressed.

The core principles of Collaborative Care suggest that this model would lend itself to effectively working with patients with substance use disorders in the primary care setting. And now, with the wide spread implementation of Collaborative Care, it makes sense to leverage this existing model's resources and workflow at a clinic to include the treatment of substance use disorders. However, there are also challenges inherent in this model that need to be addressed for this expansion in scope to occur.

The American Psychiatric Association is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians.
The American Psychiatric Association designates this live activity for a maximum of 1 *AMA PRA Category 1 Credit*[TM]. Physicians should claim only the credit commensurate with the extent of their participation in the activity.

The PCSS-MAT is a national training and mentoring project developed in response to the prescription opioid misuse epidemic and the availability of new pharmacotherapies to address opioid use disorder. It is a collaboration of: American Academy of Addiction Psychiatry (lead), American Psychiatric Association, American Osteopathic Academy of Addiction Medicine, American Society of Addiction Medicine, Association for Medical Education and Research in Substance Abuse, American College of Emergency Physicians, American College of Physicians, and National Association of Drug Court Professionals. Funding for this initiative was made possible (in part) by Providers' Clinical Support System for Medication Assisted Treatment (grant no. 1U79TI026556) from SAMHSA. The views expressed in written conference materials or publications and by speakers and moderators do not necessarily reflect the official policies of the Department of Health and Human Services; nor does mention of trade names, commercial practices, or organizations imply endorsement by the U.S. Government.
