LGBTQ Population

Population estimates of lesbian, gay, bisexual, transgender, and queer/questioning (LGBTQ) people vary widely, in part because of differences in how this data is collected. Surveys may ask about different elements of sexuality (e.g., sexual attraction, sexual behavior, self-identification, or some combination). Often, these domains are not perfectly correlated (e.g., a heterosexual-identified man who has sex with both men and women, but who is primarily attracted to women). Measuring only one or two domains can yield different population estimates.

Sexual Identity - Approximately 9 million US adults (3.8%) identify themselves as lesbian or gay (1.7%), bisexual (1.8%), or transgender (0.3%).

Sexual Behavior - Approximately 19 million Americans (8.2%) report engaging in same-sex sexual behavior.

Sexual Attraction - Nearly 25.6 million Americans (11%) acknowledge at least some same-sex sexual attraction.1,2

Transgender is a term that refers to people whose gender identity (or gender expression) differs in some way from the sex they were assigned at

birth. Transgender individuals may identify in myriad ways. Some people identify as another gender (e.g., man or woman), while others adopt a non-binary identity (e.g., genderqueer) or no gender at all (e.g., queer/questioning). Some transgender people seek medical or surgical treatments to help with gender transition while others do not. One recent study estimated that there are nearly 1 million transgender people in the U.S.\(^3\)

Population estimates of LGBTQ people also appear to vary geographically, ranging from an average of 2% in South Dakota to 5.3% in Hawaii and 8.3% in the District of Columbia.\(^4\)

### Mental Health Status and Disparities

- LGBTQ individuals are more than twice as likely as heterosexual men and women to have a mental health disorder in their lifetime.\(^5\)
- LGBTQ individuals are 2.5 times more likely to experience depression, anxiety, and substance misuse compared with heterosexual individuals.\(^6\)
- Women who identify as lesbian/bisexual are more than twice as likely to engage in heavy (alcohol) drinking in the past month than heterosexual women (8.0% vs. 4.4%). Gay/bisexual men were less likely than heterosexual men (8.6% vs 9.9%) to engage in heavy drinking in the past month.\(^7\)
- Transgender individuals who identify as African American/black, Hispanic/Latino, American Indian/Alaska Native, or Multiracial/Mixed Race are at increased risk of suicide attempts than white transgender individuals.\(^8\)
- LGBTQ individuals have higher rates of mental health service use than their heterosexual counterparts.\(^9\)

</tbody>
</table>

• The rate of suicide attempts is four times greater for lesbian, gay, and bisexual youth and two times greater for questioning youth than that of heterosexual youth. 10

• LGBTQ older adults face a number of unique challenges, including the combination of anti-LGBTQ stigma and ageism. Approximately 31% of LGBTQ older adults report depressive symptoms; 39% report serious thoughts of taking their own lives. 11

Stigma & Discrimination
Health disparities among LGBTQ people are linked to stigma and discrimination.6 For example:

• Many LGBTQ people have reported experiencing stigma and discrimination when accessing health services, leading some individuals to delay necessary health care or forego it altogether. 12

• LGBTQ individuals may have less social support than heterosexual individuals, particularly if they live in a region without a large LGBTQ population or if they have experienced rejection by their family of origin. Bisexual people may feel particularly isolated, experiencing stigma both in society at-large and within the LGBTQ community. 13

• Transgender individuals have higher rates of poverty and unemployment than non-transgender individuals.14 This is exacerbated by a lack of federal employment non-discrimination protections for LGBTQ individuals.

• LGBTQ individuals are more likely to be victims of violence compared with their heterosexual peers. The risk of experiencing violence is even higher for undocumented and racial/ethnic minority LGBTQ.15

Being LGBTQ Is Not a Mental Disorder
All major professional mental health organizations have affirmed that homosexuality is NOT a mental disorder. Being transgender or gender variant is NOT a mental illness and does not imply any impairment in judgment, stability, reliability, or general social or vocational capabilities.19
