There are many myths around serious mental illness (SMI) that are not always accurate. Let’s take a look at some of the myths and the facts behind them.

**TECHNOLOGY**

### MYTH

**Telehealth Is Not Effective For People Who Have SMI**

Several reviews show that telehealth offers the same benefits as in-person care for all mental health conditions. This includes SMI.1,2,3 The only known contraindication to telehealth is if a patient does not want to participate.

### FACT

**Studies on telehealth do not suggest that it causes paranoia or adverse symptoms for individuals who have schizophrenia.4,5 In fact, when it comes to technology, paranoia is not the biggest barrier. They are more concerned about privacy issues.6 Other studies show that technology-based interventions may even help reduce symptoms of paranoia.7**

### MYTH

**People Who Have Schizophrenia Are Paranoid About Telehealth**

A 2019 survey of the U.S. population shows that 81% already own a smartphone. This is forecast to rise as prices for devices and data continue to fall.8 There are several smaller studies on individuals who have SMI. These studies suggest that as many as 70% own smartphones.9,10,11

### FACT

**Recent studies show that: More than 50% of people who have SMI say they are somewhat or very satisfied with their phone or tablet.9,10**

### MYTH

**People Who Have SMI Do Not Own Smartphones**

**Smartphones are common now since so many things in our world are driven by technology. Like the broader population, some individuals who have SMI are wizards on their phones. Others find it to be more challenging.**

### FACT

**A 2019 survey of the U.S. population shows that 81% already own a smartphone. This is forecast to rise as prices for devices and data continue to fall.8 There are several smaller studies on individuals who have SMI. These studies suggest that as many as 70% own smartphones.9,10,11**

### MYTH

**People Who Have SMI Cannot Use Smartphones Or Health Apps**

**Studies on telehealth do not suggest that it causes paranoia or adverse symptoms for individuals who have schizophrenia.4,5 In fact, when it comes to technology, paranoia is not the biggest barrier. They are more concerned about privacy issues.6 Other studies show that technology-based interventions may even help reduce symptoms of paranoia.7**
