APA PRESIDENTIAL TASK FORCE ON SOCIAL DETERMINANTS OF MENTAL HEALTH

Clinical Workgroup

Author: Francis Lu, M.D. | November 3, 2021
CLINICAL WORKGROUP

Francis Lu, MD (Chair), Steve Koh, MD, Tresha Gibbs, MD

Please send comments or suggestions to:
francislu.md@gmail.com
The American Psychiatric Association:

- Supports legislation and policies that promote mental health equity and improve the social and structural determinants of mental health, and formally objects to legislation and policies that perpetuate structural inequities.

- Advocates for the dissemination of evidence-based interventions that improve both the social and mental health needs of patients and their families.

- Urges healthcare systems to assess and improve their capabilities to screen, understand, and address the structural and social determinants of mental health...
“The American Psychiatric Association:

• Supports medical and public education on the structural and social determinants of mental health, mental health equity, and related evidence-based interventions.

• Advocates for increased funding for research to better understand the mechanisms by which structural and social determinants affect mental illness and recovery and to develop new evidence-based interventions to promote mental health equity.”
TARGET AUDIENCE FOR THE CLINICAL WORKGROUP

1. Psychiatrists and trainees who work with
   a) patients and families
   b) other disciplines including social workers, case managers, legal service providers, counselors, care coordinators, and others as part of a team or organization.

2. Clinicians from other mental health disciplines who work with patients and families.
The Social Determinants of Mental Health

Adverse Health Outcomes
- Poor Mental Health, Mental Illnesses, Substance Use Disorders, Morbidity, Disability, Early Mortality

Reduced Options, “Poor Choices”
- Behavioral Risk Factors
- Physiologic Stress Responses
- Psychological Stress

Unfair and Unjust Distribution of Opportunity
(in terms of power, empowerment, voice, access to resources, etc.)

Public Policies
(laws, ordinances, rules, regulations, court decisions, etc.)

Social Norms
(attitudes, biases, opinions of one group toward another)

Adverse Features of the Built Environment
- Homelessness
- Poor Housing Quality, Housing Instability
- Low Education, Poor Education Quality, Educational Inequality
- Adverse Early Life Experiences, Childhood / Social Isolation

Neighborhood Disorder, Disarray, or Disconnection
- Food Insecurity, Poor Dietary Quality
- Unemployment, Under-Employment, Job Insecurity
- Discrimination and Social Exclusion

Exposure to Air, Water, or Soil Pollution
- Poor or Unequal Access to Transportation
- Poverty, Income Inequality, Wealth Inequality
- Exposure to Conflict, Violence, Shootings, War, Migration, etc.

Exposure to the Impacts of Global Climate Change
- Poor or Unequal Access to Insurance or Health Care
- Area-Level Poverty, Concentrated Neighborhood
- Poverty, Interaction and Involvement with the Criminal Justice System

Adverse Early Life Experiences, Childhood / Social Isolation
- Discrimination and Social Exclusion
- Exposure to Conflict, Violence, Shootings, War, Migration, etc.

Interaction and Involvement with the Criminal Justice System
- Adverse Early Life Experiences, Childhood / Social Isolation
- Discrimination and Social Exclusion
- Exposure to Conflict, Violence, Shootings, War, Migration, etc.

Behavioral Risk Factors
- Reduced Options, “Poor Choices”
- Neighborhood Disorder, Disarray, or Disconnection
- Food Insecurity, Poor Dietary Quality
- Unemployment, Under-Employment, Job Insecurity
- Discrimination and Social Exclusion

Exposure to Air, Water, or Soil Pollution
- Poor or Unequal Access to Transportation
- Poverty, Income Inequality, Wealth Inequality
- Exposure to Conflict, Violence, Shootings, War, Migration, etc.

Exposure to the Impacts of Global Climate Change
- Poor or Unequal Access to Insurance or Health Care
- Area-Level Poverty, Concentrated Neighborhood
- Poverty, Interaction and Involvement with the Criminal Justice System

Adverse Features of the Built Environment
- Homelessness
- Poor Housing Quality, Housing Instability
- Low Education, Poor Education Quality, Educational Inequality
- Adverse Early Life Experiences, Childhood / Social Isolation

Neighborhood Disorder, Disarray, or Disconnection
- Food Insecurity, Poor Dietary Quality
- Unemployment, Under-Employment, Job Insecurity
- Discrimination and Social Exclusion

Exposure to Air, Water, or Soil Pollution
- Poor or Unequal Access to Transportation
- Poverty, Income Inequality, Wealth Inequality
- Exposure to Conflict, Violence, Shootings, War, Migration, etc.

Exposure to the Impacts of Global Climate Change
- Poor or Unequal Access to Insurance or Health Care
- Area-Level Poverty, Concentrated Neighborhood
- Poverty, Interaction and Involvement with the Criminal Justice System

Adverse Early Life Experiences, Childhood / Social Isolation
- Discrimination and Social Exclusion
- Exposure to Conflict, Violence, Shootings, War, Migration, etc.

Interaction and Involvement with the Criminal Justice System
- Adverse Early Life Experiences, Childhood / Social Isolation
- Discrimination and Social Exclusion
- Exposure to Conflict, Violence, Shootings, War, Migration, etc.
• SDoMH are conceptualized in dynamic confluence with biomedical determinants and psychological determinants of mental health. All clinicians, no matter their particular orientation of work, should see the relevance of SDOMH as situated in an enhanced biopsychosocial model.

• We will focus not only on the 16 SDOMH, but also the underlying structures that encompass institutions, public policies, and social norms including structural racism. Hence, it will employ structural competency to address SDOMH (Hansen, Metzl, 2019)
BROADENING SDOMH

• Stigmas against the mentally ill, aged, immigrants and other marginalized persons

• Social connectedness by number and quality

• Disruptive use of social media to society and individuals

• Positive psychosocial protective factors: Community-level Wisdom, Compassion, Resilience
  – Carl Bell: “Risk factors are not predictive factors due to protective factors.”
ASSESSMENT OF SDoMH, DOCUMENTING, TREATMENT PLANNING

• Clinical evaluation via the DSM-5 Outline for Cultural Formulation (Section C) and the Cultural Formulation Interview (Questions 6 and 7) to record SDoMH as V Codes in the diagnosis so they can be bookmarked for the comprehensive treatment plan.
  – Include a focus on patients across the lifespan (CAP, adult, and geriatric) and patients seen by other psychiatry subspecialists.
• Evidence-based, reliable, and valid screening tools for identifying and quantitating SDoMH
• Documenting SDOMH in the electronic health records (V and Z codes)
• Treatment Planning
• Coding and Billing
The DSM-5 Outline for Cultural Formulation

A. Cultural identity of the individual
B. Cultural conceptualizations of distress
C. Psychosocial stressors and cultural features of vulnerability and resilience
D. Cultural features of the relationship between the individual and the clinician
E. Overall cultural assessment
OCF Part C: Psychosocial stressors and cultural features of vulnerability and resilience

• “Identify key stressors and supports in the individual’s social environment (which may include both local and distant events) and the role of religion, family, and other social networks (e.g., friends, neighbors, coworkers) in providing emotional, instrumental, and informational support.”
OCF Part C: Psychosocial stressors and cultural features of vulnerability and resilience

• “Social stressors and social supports vary with cultural interpretation of events, family structure, developmental tasks, and social context. Levels of functioning, disability, and resilience should be assessed in light of the individual’s cultural reference groups.”

• CFI Questions #6 to #7
6. Are there any kinds of support that make your [PROBLEM] better, such as support from family, friends, or others?

7. Are there any kinds of stresses that make your [PROBLEM] worse, such as difficulties with money, or family problems?
Potential psychosocial stressors/supports

• **Interpersonal relationships**
  – Religion, spirituality, moral traditions
  – Family
  – Social network

• **Social** determinants of mental health
  – *Local* by geography or time
  – *Distant* by geography or time
Other Conditions That May Be a Focus of Clinical Attention (V codes)

• “This discussion covers other conditions and problems that may be a focus of clinical attention or that may otherwise affect the diagnosis, course, prognosis, or treatment of a patient’s mental disorder… A condition or problem in this chapter may be coded if it is a reason for the current visit or helps to explain the need for a test, procedure, or treatment.”
Other Conditions That May Be a Focus of Clinical Attention (V codes)

• “The conditions and problems listed in this chapter are not mental disorders. Their inclusion in DSM-5 is meant to draw attention to the scope of additional issues that may be encountered in routine clinical practice and to provide a systematic listing that may be useful to clinicians in documenting these issues.”
Other Conditions That May be a Focus of Clinical Attention (V codes) sections

• Relational Problems
• Abuse and Neglect
• Educational and Occupational Problems
• Housing and Economic Problems
• Problems Related to the Social Environment
Other Conditions That May be a Focus of Clinical Attention (V codes) sections

- Other Problems Related to the Social Environment
  - Social Exclusion or Rejection
  - Target of (Perceived) Adverse Discrimination or Persecution
- Problems Related to Crime or Interaction with the Legal System
- Problems Related to Other Psychosocial, Personal, and Environmental Circumstances
  - Other Problem Related to Psychosocial Circumstances
V62.4 (Z60.4) Social Exclusion or Rejection

• “This category should be used when there is an imbalance of social power such that there is recurrent social exclusion or rejection by others. Examples of social rejection include bullying, teasing, and intimidation by others; being targeted by others for verbal abuse and humiliation; and being purposefully excluded from the activities of peers, workmates, or others in one’s social environment.” (p. 724)
V62.4 (Z60.5) Target of (Perceived) Adverse Discrimination or Persecution

• “This category should be used when there is perceived or experienced discrimination against or persecution of the individual based on his or her membership (or perceived membership) in a specific category. Typically, such categories include gender or gender identity, race, ethnicity, religion, sexual orientation, country of origin, political beliefs, disability status, caste, social status, weight, and physical appearance.” (p. 724-725)
V62.89 (Z 65.8) Other Problem Related to Psychosocial Circumstances (p. 725)

- No definition or description.
- Climate change can be included here.
Treatment planning

• Process
  – Negotiate and manage a treatment plan to maximize adherence/compliance

• Content
  – Biological
  – Psychological
  – Sociocultural
Treatment planning

• Sociocultural Approaches
  – Utilize cultural strengths/address cultural stressors:
    • Family
    • Spiritual/religious beliefs/practices
    • Social network
  – Address social determinants of mental health through structural competency. (Hansen and Metzl, 2019)
Structure

• Community organizations
• Health-relevant sectors (schools, housing, law enforcement/corrections, urban planning)
• Public policy
• Social norms
Competencies

- Recognizing the structures that contribute to the social determinants of mental health.
- Observing and practicing structural interventions.
  - At the individual patient and family level
  - At the social action level with organizations and institutions
V CODES (DSM-5) & Z CODES (ICD-10)

• **V Codes** (in the DSM-5 and ICD-9) and **Z Codes** (in the ICD-10), also known as **Other Conditions That May Be a Focus of Clinical Attention**

• Compared to DSM-5 V Codes, ICD-10 Z Codes are much more comprehensive and cover a wider variety of psychosocial problems.
• Hospitals should educate key stakeholders, including physicians, non-physician health care providers, and coding professionals of the important need to screen, document and code data on patients’ social needs. Utilizing Z codes will allow hospitals and health systems to better track patient needs and identify solutions to improve the health of their communities.

• As coding professionals review a patient’s medical record to identify the appropriate ICD-10-CM codes to include, they should be aware of and begin utilizing the ICD-10-CM codes included in categories Z55-Z65, listed in Table 1.
<table>
<thead>
<tr>
<th>ICD-10-CM Code Category</th>
<th>Problems/Risk Factors Included in Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>Z55 – Problems related to education and literacy</td>
<td>Illiteracy, schooling unavailable, underachievement in a school, educational maladjustment and discord with teachers and classmates.</td>
</tr>
<tr>
<td>Z56 – Problems related to employment and unemployment</td>
<td>Unemployment, change of job, threat of job loss, stressful work schedule, discord with boss and coworkers, uncongenial work environment, sexual harassment on the job, and military deployment status.</td>
</tr>
<tr>
<td>Z57 – Occupational exposure to risk factors</td>
<td>Occupational exposure to noise, radiation, dust, environmental tobacco smoke, toxic agents in agriculture, toxic agents in other industries, extreme temperature, and vibration.</td>
</tr>
<tr>
<td>Z59 – Problems related to housing and economic circumstances</td>
<td>Homelessness, inadequate housing, discord with neighbors, lodgers and landlord, problems related to living in residential institutions, lack of adequate food and safe drinking water, extreme poverty, low income, insufficient social insurance and welfare support.</td>
</tr>
<tr>
<td>Z60 – Problems related to social environment</td>
<td>Adjustment to life-cycle transitions, living alone, acculturation difficulty, social exclusion and rejection, target of adverse discrimination and persecution.</td>
</tr>
<tr>
<td>Z63 – Other problems related to primary support group, including family circumstances</td>
<td>Absence of family member, disappearance and death of family member, disruption of family by separation and divorce, dependent relative needing care at home, stressful life events affecting family and household, stress on family due to return of family member from military deployment, alcoholism and drug addiction in family.</td>
</tr>
<tr>
<td>Z64 – Problems related to certain psychosocial circumstances</td>
<td>Unwanted pregnancy, multiparity, and discord with counselors.</td>
</tr>
<tr>
<td>Z65 – Problems related to other psychosocial circumstances</td>
<td>Conviction in civil and criminal proceedings without imprisonment, imprisonment and other incarceration, release from prison, other legal circumstances, victim of crime and terrorism, and exposure to disaster, war and other hostilities.</td>
</tr>

</table>
Step 1: Collect SDOH Data
Any member of a person’s care team can collect SDOH data during any encounter.
- Includes providers, social workers, community health workers, case managers, patient navigators, and nurses.
- Can be collected at intake through health risk assessments, screening tools, person-provider interaction, and individual self-reporting.

Step 2: Document SDOH Data
Data are recorded in a person’s paper or electronic health record (EHR).
- SDOH data may be documented in the problem or diagnosis list, patient or client history, or provider notes.
- Care teams may collect more detailed SDOH data than current EHRs allow. These data should be used to identify opportunities for advancing health equity.

Step 3: Map SDOH Data to Z Codes
Assistance is available from the ICD-10-CM Official Guidelines for Coding and Reporting.
- Coding, billing, and EHR systems help coders assign standardized codes (e.g., Z codes).
- Coders can assign SDOH Z codes based on self-reported data and information documented in an individual’s health care record by any member of the care team.

Step 4: Use SDOH Z Code Data
Data analysis can help improve quality, care coordination, and experience of care.
- Findings can be used to identify opportunities for advancing health equity.
- A Disparities Impact Statement can be used to identify unmet needs.
- Findings can be shared with social service organizations, providers, health plans, and consumer/patient advisory boards.

Step 5: Report SDOH Z Code Data Findings
SDOH data can be added to key reports for executive leadership and Boards of Directors to identify value-based care opportunities.

For Questions: Contact the CMS Health Equity Technical Assistance Program

USING SDOH Z CODES
Can Enhance Your Quality Improvement Initiatives

Health Care Administrators
Understand how SDOH data can be gathered and tracked using Z codes.
- Select an SDOH screening tool.
- Identify workflows that minimize staff burden.
- Provide training to support data collection.
- Invest in EHRs that facilitate data collection and coding.
- Decide what Z code data to use and monitor.
Develop a plan to use SDOH Z code data to:
- Enhance patient care.
- Improve care coordination and referrals.
- Support quality measurement.
- Identify community/population needs.
- Support planning and implementation of social needs interventions.
- Monitor SDOH intervention effectiveness.

Health Care Team
Use a SDOH screening tool.
- Follow best practices for collecting SDOH data in a sensitive and HIPAA-compliant manner.
- Consistently document standardized SDOH data in the EHR.
- Refer individuals to social service organizations and appropriate support services through local, state, and national resources.

Coding Professionals
Follow the ICD-10-CM coding guidelines.
- Use the CDC National Center for Health Statistics ICD-10-CM Browser tool to search for ICD-10-CM codes and information on code usage.
- Coding team managers should review.
- Assign all relevant SDOH Z codes to support quality improvement initiatives.

- Z55 – Problems related to education and literacy
- Z56 – Problems related to employment and unemployment
- Z57 – Occupational exposure to risk factors
- Z59 – Problems related to housing and economic circumstances
- Z60 – Problems related to social environment

This list is subject to revisions and additions to improve alignment with SDOH data elements.

Revision Date: February 2021

POLL QUESTIONS FOR THE AUDIENCE

• To what extent do you use V or Z codes to assess for SDoMH in your clinical work?
  – Not at all
  – Occasionally
  – Often
  – Always

• To what extent do you document V or Z codes in the electronic health record in your clinical work?
  – Not at all
  – Occasionally
  – Often
  – Always
POLL QUESTIONS FOR THE AUDIENCE

• To what extent do you address V or Z codes in treatment planning in your clinical work?
  – Not at all
  – Occasionally
  – Often
  – Always

• To what extent do you bill for/receive reimbursement for treatment addressing V or Z codes in your clinical work?
  – Not at all
  – Occasionally
  – Often
  – Always
