

SET for Success

Checklist

The Supplemental Education and Training (**SET**) program is an online experience designed to supplement and complement psychiatric training and education. **SET** provides Resident-Fellow Members (**RFMs**) with online resources, through the Learning Center, to enhance their medical knowledge and practice of psychiatry.

SET takes into consideration the core competencies of psychiatry and focuses on the achievement of milestones in psychiatric training, including psychiatric practice, treatment and care, and special populations.

How to Use SET

Several features that make **SET** and the APA Learning Center an invaluable tool for trainees and training programs include the “My Portfolio” tracking and reporting section, which provides certificates and transcripts documenting the learning progress, and the “Catalog” which offers the ability to search by topic, sub-topic, core competency, milestone, and activity type. Program Directors at 100% Club residency training programs now receive free access to all **SET** activities, including associated **CME** credits.

- **Individual Learning:** Complete courses independently to supplement the patient care setting.
- **Group Learning:** Complete courses as a group or use for presentations, such as Grand Rounds.
- **Multi-Approach Learning:** Complete courses individually and apply and contextualize in daily practice.
- **For Program Directors:** Reinforce teaching in the patient care setting and help reach learning milestones.
